

eDictionary

Version 1.0

\$295 (USD)*

eDictionary is a predefined set of data groups for the VISUAL database. Using eDictionary enables your staff to quickly use reports as decision management tools, without having an intimate knowledge of the VISUAL database. With it's time saving features, the eDictionary is also a powerful tool for more experienced report writing users.

Benefits

- Users do not need to understand the intricacies of the database to pull out useful information for their reports and ad-hoc queries
- Reduce IT support for end user ad-hoc queries and reports
- Save time normally required to perform tedious table linking, database field decoding, and data mining details

Features

- Each dictionary presents data grouped by the business functions:

Quoting	Receiving
Sales	Shipping
Inventory	General Ledger
Purchasing	Receivables
Work Orders	Payables
- Presents common baseline information from the VISUAL database, hiding more detailed and esoteric data
- All data has been denormalized and therefore does not require linking tables
- Columns have been renamed to present a clear, intuitive understanding of their function
- Column descriptions are available within the eDictionary
- Codes used in the database are decoded into easily understood terms
- Future changes to the VISUAL database are automatically remapped in your existing reports by using an updated eDictionary
- Utilizes an ODBC connection to the VISUAL database
